

Thanks for choosing Oceamo!

Proper sampling is a crucial part of analysis and significantly contributes to the reliability of the results.

Please read the instructions carefully and follow them precisely. If the sampling is done incorrectly, certain values may not be measurable, or the results could be distorted.

Sampling:

 <p>1. Rinse the included 20 ml syringe several times with aquarium water, then fill it completely with aquarium water.</p>	 <p>2. Attach the included filter to the syringe.</p> <p>Slowly push the water through the filter and discard the first 5 ml.</p>	 <p>3. Open the sample vial and fill it with the remaining water through the filter.</p> <p>Then, securely screw the sample vial closed.</p>	 <p>4. Store the sample in a cool place (e.g., in the refrigerator) until it is ready for shipping.</p>
 <p>5. Log in to www.oceamo-portal.com (if you don't have an account yet, please register) and submit your sample.</p> <p>You will receive a confirmation email. Make sure you have received the confirmation.</p>	 <p>6. Pack the vial securely and send it to us:</p> <p><i>Oceamo e.U. Schulstraße 5 3200 Ober-Grafendorf</i></p>	<p>You will be notified as soon as your sample arrives and once your analysis results are ready!</p>	<p>If you have any questions, feel free to contact us:</p> <p>office@oceamo.at +43 (0) 650 2209329</p>
